### SUMMARY

Senior mobile engineer with 5+ years of experience building cross-platform products in Flutter. I've taken apps from early concept to production and kept improving them after launch, across POS systems, CRM tools, real-estate platforms and service apps. Today I lead mobile development at The Address Investments, where I own the shared architecture behind several store apps and mentor the team that builds on it. I care most about scalable architecture, fast and reliable apps, and a user experience that feels effortless.

### EXPERIENCE

**Senior Flutter Engineer** · The Address Investments, Cairo — Feb 2025 – Present

- Lead mobile development across the company's store apps: Address Circle (10K+ downloads, 5-star on the App Store), My TAI (5K+ downloads, 4.5-star from 50+ ratings) and The MarQ.
- Designed the shared Flutter base project the apps are built on: Clean Architecture, BLoC, dependency injection with get_it/injectable, go_router, Dio networking and a reusable widget library.
- Integrated Firebase messaging, analytics and remote config, deep links, biometric login and in-app updates, keeping releases on iOS and Android consistent.
- Published customized_country_phone_picker on pub.dev (160 pub points), an EN/AR phone input now used in the company apps.
- Lead technical decisions, review code and mentor the mobile team.

**Flutter Developer** · POSBANK ME, Remote — Mar 2022 – Feb 2025

- Built a customized POS system for restaurants and markets that reduced order processing time by 50% and increased client sales by 20%.
- Implemented real-time sales tracking and inventory features over Socket IO, reducing waste by 25%.
- Developed reusable Flutter packages and native plugins for payment integrations and receipt printing, shared across projects.
- Shipped one Flutter codebase to four stores: App Store, Google Play, Huawei AppGallery and Microsoft Store.
- Built the KSA E-Invoice QR Reader, which grew to 250K+ active users.

### SELECTED PROJECTS

**Snapos** · App Store · Google Play · AppGallery · Microsoft Store — Apr 2022 – Feb 2025

Cloud POS for restaurants and retail, running on phones, tablets and Windows terminals. Cut order processing time by 50%.

- Problem: restaurant staff needed one fast POS that works on the hardware they already own, from Android tablets to Windows counters.
- My role: Flutter developer on the core app, from ordering flow to payments and cloud item management.
- Hard part: keeping orders, sales and inventory in sync in real time over Socket IO across four platforms from one codebase.
- Result: order processing time down 50%, client sales up 20%, shipped on App Store, Google Play, Huawei AppGallery and Microsoft Store.

Built with: Flutter, Dart, Firebase, Socket IO, Windows

**Address Circle** · App Store · Google Play 2025 – Present

Real-estate platform that connects brokers and agents with The Address Investments' projects, with faster earning cycles and rewards. 10K+ downloads, 5-star on the App Store.

- Problem: brokers had no single place to find exclusive projects, submit leads and track their earnings.
- My role: lead Flutter engineer, owning architecture, delivery and releases.
- Hard part: a modular Clean Architecture + BLoC codebase with deep links, push notifications, remote config, biometric login and document scanning, all kept fast with skeleton loading and pagination.
- Result: 10K+ downloads on Google Play and a 5-star App Store rating.

Built with: Flutter, BLoC, Clean Architecture, Firebase, go_router

**My TAI** · App Store · Google Play Feb 2025 – Present

CRM and employee app for The Address Investments' 2,500+ staff: leads, customers, vacancies and real-time updates. 5K+ downloads, 4.5-star from 50+ ratings.

- Problem: sales teams needed the full CRM in their pocket, not only on the desktop.
- My role: senior Flutter engineer maintaining and extending the app.
- Hard part: real-time updates over Socket IO, offline caching with Hive, charts and maps on large datasets.
- Result: 5K+ downloads and a 4.5-star App Store rating from 50+ ratings.

Built with: Flutter, BLoC, Socket IO, Hive, Charts

**The MarQ** · App Store · Google Play Feb 2025 – Present

Resident and community app for The MarQ developments. 4.5-star on the App Store.

Built with: Flutter, Dart, Firebase

**E-Invoice QR Reader (KSA)** · App Store · Google Play Jul 2022 – Jan 2023

Reads Saudi ZATCA e-invoice QR codes, tracks transactions and visualizes expenses with exportable reports. 250K+ active users.

Built with: Flutter, Dart, QR Scanner, KSA E-Invoice

**POPs Restaurant+** · App Store · Google Play · AppGallery · Microsoft Store Apr 2022 – Feb 2025

The restaurant edition of the POPs POS line, a sibling of Snapos (formerly POPs Enterprise), built for restaurant workflows and shipped from one Flutter codebase to App Store, Google Play, Huawei AppGallery and Microsoft Store.

Built with: Flutter, Dart, Firebase, Socket IO

**Ovii Care** · App Store Jan 2024 – Jan 2025

Freelance project: female-centric health and wellness app with personalized tracking, expert guidance, in-app community and payments.

Built with: Flutter, Dart, Payment Gateway, Notifications, Charts

**Country Phone Picker** · pub.dev · GitHub 2025

Open-source Flutter package (customized_country_phone_picker): phone input with a country picker, EN/AR names, paste-to-detect and strict validation. 160 pub points on pub.dev.

Built with: Flutter, Dart, Open Source

## SKILLS

Flutter · Dart · Android · Kotlin · Java · BLoC / Cubit · Provider · Clean Architecture · Dependency Injection (get_it, injectable) · go_router · Dio / REST APIs · Socket IO · Firebase · Push Notifications (FCM) · Remote Config & Analytics · Local Storage (Hive, Secure Storage) · Payment Gateways · Google Maps · Localization (EN / AR, RTL) · Unit & Widget Testing · CI/CD (GitHub Actions) · Firebase Hosting · Git · SOLID & Design Patterns · Python

## EDUCATION

**Bachelor Degree, Systems and Computers Engineering** · Al-Azhar University Sep 2017 – Jun 2022
